The Pick List Kit

1 AI A Day · Day 42 · @jjwong.ai

JJ Wong · jjwong.ai

The prompt, the pick and pack sheets, and the before-sealing check.

The idea

Many wrong-item parcels start before packing — on the list. Pick once per exact SKU code for the whole batch, then pack per order.

The prompt

> Here are today's pending orders with order ID, SKU code and quantity.
> Make a pick list grouped by exact SKU code — never merge different codes, even if the names look similar.
> Sort by this shelf order: [locations].
> Then list each order with its SKU codes for packing.
> Flag any SKU code not in my list: [SKU list].

The pick sheet

SHELF	SKU CODE	VARIANT	QTY TO PICK	PICKED ✓

The pack sheet

ORDER ID	SKU CODES + QTY	PACKED ✓	CHECKED ✓

The before-sealing check

- [ ] SKU code on the item matches the pack sheet
- [ ] Variant (colour / size) matches
- [ ] Quantity matches
- [ ] Freebies / add-ons included if the order has them

Shelf labels

Put a photo of each variant on its shelf label. When two SKUs look alike, the label is the last chance to catch it.

The trap

AI merges look-alike variants. "Laptop bag × 17" hides 12 black and 5 white. Group by exact code — and tell it never to merge.
